

PENYAKIT BURUK/REPUT DAUN

Patogen penyebab: *Rhizoctonia solani*

Tanaman: Jenis Brassica seperti Sawi

Tanda-tanda penyakit:

Kesan buruk pada daun.

Cara merebak:

- Air Hujan.
- Peralatan ladang dan sistem pengairan yang membawa tanah yang telah dicemari.
- Sisa-sisa tanaman yang berpenyakit.

Kawalan:

- Buang dan bakar daun-daun yang terkena kesan serangan.
- Buang dan bakar pohon-pohon yang sudah teruk terkena serangan.
- Amalkan tanaman bergilir.
- Sembur dengan racun penyakit yang disyorkan pada peringkat awal sebaik-baiknya sebelum adanya kesan serangan.

Racun-racun yang disyorkan:

Azoxystrobin (Amistar), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (Trineb, BM Maneb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Pencycuron (Monceren, Beacon), Iprodione (Rovral), Trifloxystrobin (Flint).

LEAF ROT DISEASE

Causal Organism: *Rhizoctonia solani*

Crop: *Brassica* sp.

Symptoms:

Rotting symptom on leaves.

Method of Spread:

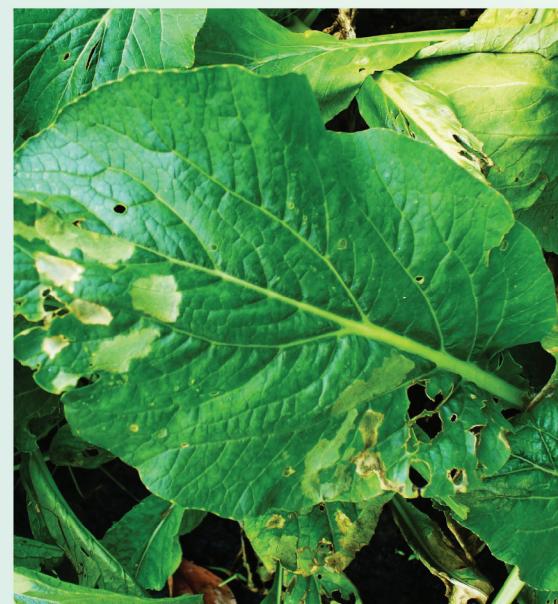

- Rain splash.
- Water system and farming tools that carry along infected soil.
- Infected crop residues.

Control:

- Dispose and burn infected leaves.
- Dispose and burn badly infected plants.
- Practice crop rotation.
- Spray with recommended fungicides before symptoms appear.

Recommended Fungicides:

Azoxystrobin (Amistar), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (Trineb, BM Maneb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Pencycuron (Monceren, Beacon), Iprodione (Rovral), Trifloxystrobin (Flint).

PENYAKIT ANTRAKNOS

Patogen penyebab: *Colletotrichum* sp.

Tanaman: Lada

Tanda-tanda penyakit:

Kesan buruk pada buah (tanda berpusar) dan buah akan gugur.

Cara merebak:

- Air Hujan.
- Angin.
- Sisa-sisa tanaman yang berpenyakit.

Kawalan:

- Amalkan tanaman bergilir dengan jenis tanaman yang lain.
- Buang dan bakar daun, buah dan ranting yang terkena kesan serangan.
- Gunakan biji benih yang bebas/tahan penyakit.
- Sembur dengan racun penyakit sebaik-baiknya 4 minggu selepas berbunga bagi mencegah serangan penyakit pada tanaman lada.

Racun-racun yang disyorkan:

Azoxystrobin (Amistar), Azoxystrobin + Difeniconazole (Amistartop), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Dithane M-45, Disan 45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Prochloraz manganese chloride (Octave), Difeniconazole (Score, Barb), Tebuconazole (Folicur), Trifloxystrobin (Flint), Iprodione (Rovral).

ANTHRACNOSE DISEASE

Causal organism: *Colletotrichum* sp.

Crop: Chilli

Symptoms:

Rotting of the fruits (concentric rings) and eventually fruits drop.

Method of Spread:

- Rain splash.
- Wind.
- Infected plant residues.

Control:

- Crop rotation with different plant groups.
- Dispose and burn infected leaves, fruits and twigs.
- Use disease-free/resistant seeds.
- Spray with recommended fungicides at least 4 weeks after flowering as a prevention method.

Recommended Fungicides:

Azoxystrobin (Amistar), Azoxystrobin + Difenconazole (Amistartop), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Dithane M-45, Disan 45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Prochloraz manganese chloride (Octave), Difenconazole (Score, Barb), Tebuconazole (Folicur), Trifloxystrobin (Flint), Iprodione (Rovral).

PENYAKIT LEPUH PUTIH

Patogen penyebab: *Albugo ipomoeae-panduratae* (Kangkong)
Albugo bliti (Bayam)

Tanaman: Kangkong dan Bayam

Tanda-tanda penyakit:

Bintil-bintil kecil berwarna kuning pada permukaan daun. Apabila patogen semakin membiak, bintil berwarna putih akan kelihatan pada bahagian bawah daun.

Cara merebak:

- Air
- Angin

Kawalan:

- Memantau kesan serangan pada peringkat awal tanaman, jika ada kesan serangan disyorkan dibuang dan bakar.
- Sembur tanaman dengan racun penyakit yang disyorkan pada peringkat awal.
- Petik hasil tanaman 19 – 21 hari selepas bertanam bagi mengelak kesan serangan yang teruk.
- Amalkan tanaman bergilir.

Racun-racun yang disyorkan:

Azoxystrobin (Amistar), Chlorothalonil (Daconil, Rovaltac), Copper oxychloride (Cupravit, Copper Super, Coprantol, Pipertox), Mancozeb (Dithane M-45, Disan 45, MZ-45)

WHITE BLISTER DISEASE

Causal Organism: *Albugo Ipomoeae-panduratae* (Water convolvulus)
Albugo bliti (Spinach)

Crop: Water Convolvulus and Spinach

Symptoms:

Yellow blisters on leaf surfaces that turns white as the pathogen matures which shows on the underside of the leaves.

Method of Spread:

- Water.
- Wind.

Control:

- Early stage monitoring, once symptoms are detected dispose and burn infected leaves.
- Spray with recommended fungicides at early stage.
- Harvest crops 19 – 21 days after transplanting to avoid higher levels of infection.
- Crop rotation.

Recommended Fungicides:

Azoxystrobin (Amistar), Chlorothalonil (Daconil, Rovallac), Copper oxychloride (Cupravit, Copper Super, Coprantol, Pipertox), Mancozeb (Dithane M-45, Disan 45, MZ-45)

PENYAKIT BURUK/REPUT DAUN

Patogen penyebab: *Rhizoctonia solani*

Tanaman: Jenis Brassica seperti Sawi

Tanda-tanda penyakit:

Kesan buruk pada daun.

Cara merebak:

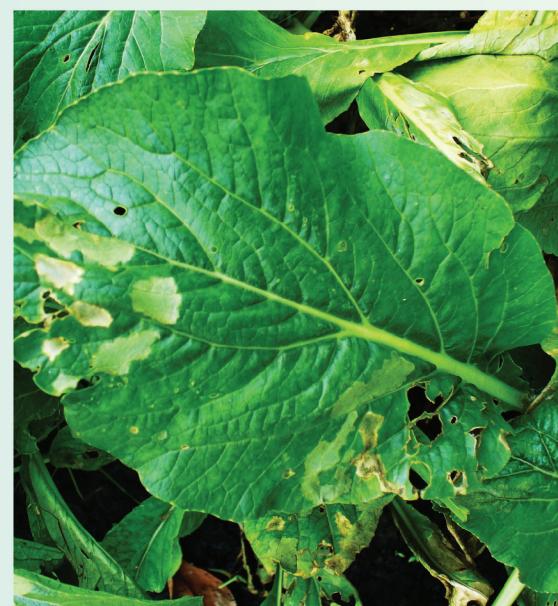

- Air Hujan.
- Peralatan ladang dan sistem pengairan yang membawa tanah yang telah dicemari.
- Sisa-sisa tanaman yang berpenyakit.

Kawalan:

- Buang dan bakar daun-daun yang terkena kesan serangan.
- Buang dan bakar pohon-pohon yang sudah teruk terkena serangan.
- Amalkan tanaman bergilir.
- Sembur dengan racun penyakit yang disyorkan pada peringkat awal sebaik-baiknya sebelum adanya kesan serangan.

Racun-racun yang disyorkan:

Azoxystrobin (Amistar), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (Trineb, BM Maneb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Pencycuron (Monceren, Beacon), Iprodione (Rovral), Trifloxystrobin (Flint).

LEAF ROT DISEASE

Causal Organism: *Rhizoctonia solani*

Crop: *Brassica* sp.

Symptoms:

Rotting symptom on leaves.

Method of Spread:

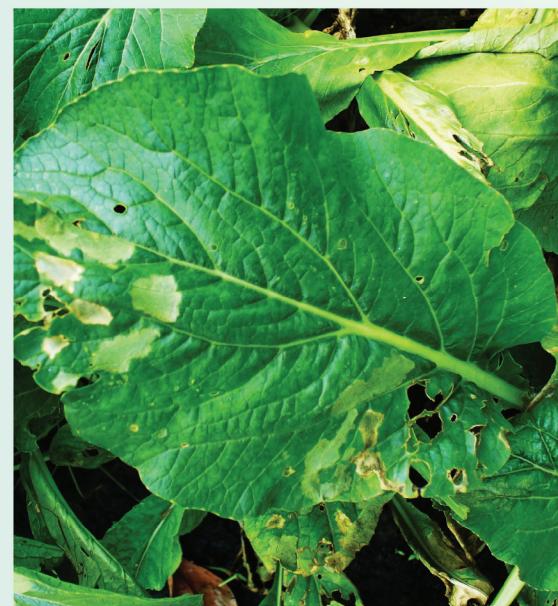

- Rain splash.
- Water system and farming tools that carry along infected soil.
- Infected crop residues.

Control:

- Dispose and burn infected leaves.
- Dispose and burn badly infected plants.
- Practice crop rotation.
- Spray with recommended fungicides before symptoms appear.

Recommended Fungicides:

Azoxystrobin (Amistar), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (Trineb, BM Maneb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Pencycuron (Monceren, Beacon), Iprodione (Rovral), Trifloxystrobin (Flint).

PENYAKIT KULAPUK DAUN

Patogen penyebab: *Pseudocercospora fuligena*

Tanaman: Tomato

Tanda-tanda penyakit:

Bintik berwarna kuning pucat pada permukaan atas daun dan berdebu kehitaman pada permukaan bawah daun.

Cara merebak:

- Angin.
- Sisa-sisa tanaman yang berpenyakit.

Kawalan:

- Pangkas, buang dan bakar daun-daun yang terkena kesan serangan.
- Amalkan tanaman bergilir.
- Jika tahap serangan teruk, sembur seluruh pokok dengan racun penyakit bagi tanaman yang belum berbuah atau berbuah pada peringkat awal.

Racun-racun yang disyorkan:

Benomyl (CH Benomyl, Benex), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Trifloxystrobin (Flint).

LEAF MOLD DISEASE

Causal Organism: *Pseudocercospora fuligena*

Crop: Tomato

Symptoms:

Pale yellow lesions or spots on the upper leaf surface. The lesions or spots on the lower leaf surface have fungal growth that turns from grey to black.

Method of Spread:

- Wind.
- Infected plant residues.

Control:

- Dispose and burn infected leaves.
- Practice crop rotation with different plant groups.
- If the infection is severe, spray the whole plant (before fruiting and during early fruiting stage) with the recommended fungicide.

Recommended Fungicides:

Benomyl (CH Benomyl, Benex), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Disan 45, Dithane M-45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Trifloxystrobin (Flint).

PENYAKIT MILDEW KEKAPAS

Patogen penyebab: *Pseudoperonospora cubensis*

Tanaman: Tanaman jenis Cucurbit seperti timun, labu, batat dan peria

Tanda-tanda penyakit:

- Tompok-tompok berwarna hijau pucat akan kelihatan pada permukaan daun.
- Warna hijau pucat akan bertukar menjadi bintik-bintik kuning bersegi-segi diantara urat-urat daun.
- Bintik-bintik bersegi atau bulat berwarna kelabu atau perang.
- Jika serangan bertambah teruk, penyakit ini boleh mengakibatkan keseluruhan daun menjadi kering, bergulung atau mati.
- Pada permulaan serang, tanda penyakit akan kelihatan pada daun-daun tua, kemudian akan merebak ke daun-daun muda sehingga sebahagian besar pohon dijangkiti.

Cara merebak:

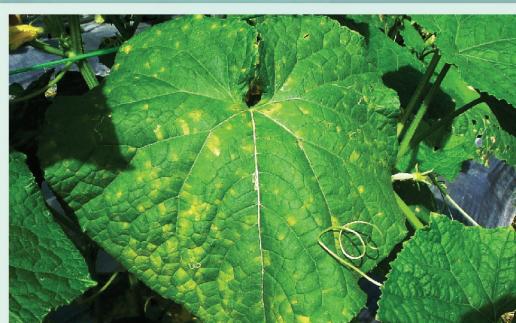

- Spora yang ditiup angin.
- Tanah dan sisa-sisa tanaman yang pernah dijangkiti.
- Pengumpulan air dari hujan, embun, kabus dan pengairan pancutan.

Kawalan:

- Amalkan jarak tanaman yang sesuai untuk menggalakkan pengudaraan.
- Pangkas daun-daun di bahagian bawah yang dijangkiti bagi mengurangkan tahap jangkitan.
- Buang dan bakar sisa-sisa tanaman selepas menuai bagi mengelakkan sebaran penyakit.
- Amalkan pergiliran tanaman dengan menanam tanaman jenis lain, seperti kacang panjang atau jagung manis.
- Pengairan pancutan mestilah dielakkan kerana ini akan menggalakkan pembiakan penyakit.

Racun-racun yang disyorkan:

Azoxystrobin (Amistar), Azoxystrobin + Difenoconazole (Amistartop), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Dithane M-45, Disan 45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Propamocarb hydrochloride (Previcur-N), Copper hydroxide (Blue Pro, Commande, Kocide), Copper oxychloride (Cupravit, Copper Super, Coprantol, Pipertox), Tribasic copper sulphate (Cuproxit), Trifloxystrobin (Flint).

DOWNY MILDEW DISEASE

Causal Organism: *Pseudoperonospora cubensis*

Crop: Cucurbit crops, such as cucumber, pumpkin, honeydew melon and bitter gourd

Symptoms:

- Appearance of pale green areas on upper surface of leaves.
- Pale green areas change to yellow spots which remain angular bounded by veins.
- Grey to brown angular or circular spots.
- Spots turn grey, dry and papery as it becomes severe.
- Heavy infection causes the whole leaves to dry up and curl followed by death.
- Symptoms will first appear on lower leaves, then progressively appear on younger leaves until most leaves are affected

Method of Spread:

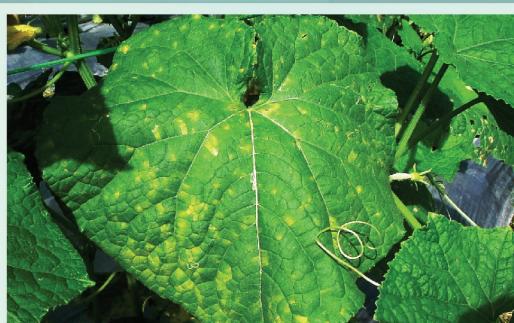

- Spores blown by the wind.
- Soil dan residues from previously-infected plants.
- Accumulation of water via rain, dew, fog and sprinkler irrigation.

Control:

- Wide spacing between plants to allow free air movement.
- Pruning of infected bottom leaves to reduce the level of infection.
- Remove and destroy all crop residues after harvest to prevent carry-over of the fungal pathogen from infested residues.
- Rotate cucurbits with other crops such as long bean or sweet corn.
- Overhead or sprinkler irrigation should be avoided as this will encourage the development of disease.

Recommended Fungicides:

Azoxystrobin (Amistar), Azoxystrobin + Difenoconazole (Amistarop), Benomyl (Benex, CH Benomyl), Carbendazim (Bandazim, Halex Carbendazim), Chlorothalonil (Daconil, Rovaltac), Mancozeb (Dithane M-45, Disan 45, MZ-45), Maneb (BM Maneb, Trineb), Propineb (Antracol, Catalyst), Zineb (Zinacol), Captan (Captan), Propamocarb hydrochloride (Previcur-N), Copper hydroxide (Blue Pro, Commande, Kocide), Copper oxychloride (Cupravit, Copper Super, Coprantol, Pipertox), Tribasic copper sulphate (Cuproxit), Trifloxystrobin (Flint).

PANDUAN PENGGUNAAN RACUN PENYAKIT TANAMAN OGOS 2014

Bahan Aktif	Nama Perdagangan	Penyerapan	Sukatan bagi 4.5 liter Air	Jarak Penggunaan	Tempoh Pemetikan Hasil Selepas Semburam
Azoxystrobin	Amistar	Meresap	2.5ml	7 hari	3 hari
Azoxystrobin + Difenoconazole	Amistartop	Meresap	5ml (sayur/buah) 7ml (padi)	7 hari (sayur/buah) 14 hari (padi/lada) 28 hari (padi)	7 hari (sayur/buah) 14 hari (lada) 28 hari (padi)
Benomyl	Benlate CH Benomyl Benex	Meresap	5g 2g 2g	14 hari	14 hari
Bitertanol	Baycor	Meresap	7ml	14 hari	14 hari
